Art Unit: 2862

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a method for determining the end point of polishing using a plurality of n-nary counters for frequency measuring, classified in class 377, subclass 19.
- II. Claims 7-11, drawn to an eddy current sensor used in a polishing apparatus to determine the thickness of a film on a substrate by measuring a change in frequency, classified in class 324, subclass 230.
- III. Claims 12, 13 and 16-18, drawn to an eddy current sensor used in a polishing apparatus to determine the thickness of a polished film by measuring a change in resistance, classified in class 324, subclass 716.
- IV. Claims 14 and 15, drawn to an eddy current sensor with a synchronous detector, classified in class 324, subclass 233.

The inventions are distinct, each from the other because:

The inventors of Group I-IV embody separate inventive concepts capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2862

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
